

Making it Easy

Since its introduction in 2007 the NuFlo Scanner 2000 microEFM has proven to be easy ... easy to install, easy to use, easy to communicate with and easy to support. Now, as the result of a partnership with AutoSol and access to its AES enterprise software solution, the many benefits of the Scanner 2000 can be easily integrated into most SCADA networks. Proven benefits include a year of autonomous power, the simultaneous measurement of oil and gas, a huge log capacity and an outstanding track record in CBM, well testing, steam measurement, 3-phase separators, gas storage and remote installations.
