

## **Zedi successfully enters US market by retrofitting National Fuel gas wells**

CALGARY, ALBERTA – (Marketwire – January 13, 2009) – Zedi Inc. (“Zedi”) (TSX VENTURE: ZED) announced the company’s entry into the US market with National Fuel of Denver, CO as an anchor customer. National Fuel has recently completed phase one of a corporate-wide retrofit project deploying Zedi SCADA™ on all producing gas wells.

“We are delighted with the results we see already – our production has increased and we can be more proactive in looking after our wells and supporting the people that manage them,” says Diane Thompson, President, National Fuel. “We are confident that the corporate adoption of Zedi’s solutions on all of our wells will make it possible for us to drive the improvements we need in our operations.”

Zedi engineered a solution that was designed for the unique characteristics of each well site to allow National Fuel to control and optimize intermittent flowing wells. Before the Zedi SCADA installation, field personnel drove over two and a half hours on treacherous mountain trails to gather well site data or manually adjust valves for gas flow. Site visits are significantly reduced as authorized National Fuel personnel, from field to head office, can now view near real-time well information and analyze graphical representations of production to remotely control well site values at their convenience on their Internet-enabled computer. Programming call-out alarms from well sensors to mobile phones or pagers allows National Fuel personnel to react immediately to well site events, recovering valuable production by reducing downtime. In addition to helping manage strict regulatory reporting requirements, this flexibility is enabling faster and smarter production decisions.

“We are honored that a company with such a rich history and deep experience in the Rocky Mountain basin has chosen to work with Zedi. We will deliver solutions and services that are worthy of that heritage and that will result in an exceptional customer experience for National Fuel,” says Matthew Heffernan, Zedi President and CEO.

About National Fuel Corporation:

National Fuel Corporation (NFC) is a privately owned independent natural gas producer and operator of wells located primarily in Utah and Colorado. The Company was incorporated in the state of Colorado in May, 1971. Over the ensuing years, it has grown through emphasizing operational efficiencies and acquiring producing properties and undeveloped leases. From a strategic perspective, NFC concentrates primarily on the acquisition of proven producing properties and close-in development projects. Exploration risk is mitigated by working with industry partners under standard farm-out arrangements.

About Zedi Inc.:

Zedi Inc. (TSX VENTURE: ZED) specializes in production operations management, delivering systems and services that help oil and gas producers to efficiently manage people, assets and information. We enable our customers to increase earnings from production, decrease operating costs, effectively utilize human, physical and fiscal assets and mitigate compliance risk. Established in 1987, Zedi has enhanced the operational performance of more than 200 upstream, midstream and oilfield service customers.
