

**Texas Energy Network (TEN) announces the first LTE 4G tower deployment in Andrews County, TX at Entelec.**

TEN, has deployed it's first of many LTE 4G wireless tower sites in Andrews county, TX. The tower provides LTE 4G coverage throughout much of Andrews County, extending about 18 miles in radius from its location in west central Andrews County.

Andrews County is the leading oil producing county in Texas as measured by a number of parameters. Andrews leads Texas counties in drilling rig count, number of producing oil wells and in crude oil production. It is one of the most productive crude oil counties in the country.

TEN's May 2011 LTE 4G cell site deployment in Andrews County is the first of its kind and one of many to come.

TEN plans to blank the oilfields of the Permian Basin and other selected oilfields in the United States with high-speed bandwidth utilizing licensed 700 MHz and AWS spectrum. We are increasing greatly the data communication capabilities available to exploration firms, producers, operators and oil field service providers in the oilfield.

**Texas Energy Network and Ericsson are taking Oilfield Communications to the Power of TEN**

Texas Energy Network (TEN) and Ericsson announced their strategic partnership at Entelec 2011 in Houston, TX last week. TEN and Ericsson worked side by side at Entelec to communicate to all attendees that we are working together to take Oilfield Communications to the Power of TEN.

Ericsson and TEN plan to deploy 24 LTE 4G wireless towers in 19 counties of the Permian Basin over the next 12 to 18 months. By bringing 4G LTE solutions, over licensed 700 MHz and AWS spectrum to the oilfield, TEN and Ericsson will increase the high-speed communication options available to the oil and gas industry exponentially. Texas Energy Network, powered by Ericsson, is taking Oilfield Communication to the power of TEN.
